Subject Index

A

ABC1 gene
  fungal pathogen genomics and, 348
Abies merticola
  disease dynamics in plant communities and, 26
Abiotic stressors
  climate change effects on plant disease and, 489, 492–94, 496–98, 502
Abscisic acid
  ethylene in host-pathogen interactions and, 405
  inducible defense-related proteins in infected plants and, 152
Acacia koa
  disease dynamics in plant communities and, 28
Acanthamoeba spp.
  fitness of human enteric pathogens on plants and food safety, 380
ACE1 gene
  fungal pathogen genomics and, 348–49
Aceria tosichella
  virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 195
ACO genes
  ethylene in host-pathogen interactions and, 395–96
ACRS genes
  history of research, 9
ACS genes
  ethylene in host-pathogen interactions and, 396–97
Action threshold
  Heterodera glycines and, 288
Acyl-homoserine lactone
  Enterobacteriaeceae and comparative genomics, 323
  fitness of human enteric pathogens on plants and food safety, 379
Adaptation
  climate change effects on plant disease and, 494–95, 499, 501–2
  tropical plant viruses and, 235, 251
Adelges tsugae
  disease dynamics in plant communities and, 28
Aegilops spp.
  Tilletia nonsystemic bunt fungi and, 125–26
aggA gene
  Enterobacteriaeceae and comparative genomics, 325
Aggregates
  fitness of human enteric pathogens on plants and food safety, 378–79
Agrobacterium tumefaciens
  Enterobacteriaeceae and comparative genomics, 321, 325
  genome packaging by spherical plant RNA viruses and, 69, 79
Agrostis stolonifera
  breeding cool-season turfgrasses for disease resistance and, 213, 219
Albugo candida
  flower-infecting fungi and, 262, 268
Alnus spp.
  disease dynamics in plant communities and, 27
Alternaria spp.
  ethylene in host-pathogen interactions and, 396
  fitness of human enteric pathogens on plants and food safety, 380

flower-infecting fungi and, 267–68
fungal pathogen genomics and, 339, 341
history of research, 7–9
inducible defense-related proteins in infected plants and, 136, 141, 145–46
phenazines in fluorescent *Pseudomonas* spp. and, 420
Ammophila arenaria
disease dynamics in plant communities and, 25
Amycolata hydrocarbonoxydans
phenazines in fluorescent *Pseudomonas* spp. and, 420
Anabaena flos-aqua
phenazines in fluorescent *Pseudomonas* spp. and, 422
Andropogon gerardii
climate change effects on plant disease and, 493
Annotation
fungal pathogen genomics and, 343–44
Anthoxanthun odoratum
disease dynamics in plant communities and, 28
Anthracoidea spp.
flower-infecting fungi and, 268, 275
Antibiotics
phenazines in fluorescent *Pseudomonas* spp. and, 417–36
Antifreeze activity
inducible defense-related proteins in infected plants and, 135
AP2 gene
ethylene in host-pathogen interactions and, 401–2
Aphis gossypii
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 185–97, 203
Apical meristem
flower-infecting fungi and, 261, 268, 273
Apomyxis
breeding cool-season turfgrasses for disease resistance and, 214–16
Apoplastic effectors
oomycete effector secretome catalogue and, 45–51
Apoptosis
evolution of plant pathogenicity in *Streptomyces*, 469, 477, 482
Arabidopsis thaliana
ethylene in host-pathogen interactions and, 394, 396–406
evolution of plant pathogenicity in *Streptomyces*, 476–78, 481
fitness of human enteric pathogens on plants and food safety, 375, 381
fungal pathogen genomics and, 341, 356
Heterodera glycines and, 296
history of research, 8–9, 12–13
inducible defense-related proteins in infected plants and, 135–38, 141–44, 146–47, 152
oomycete effector secretome catalogue and, 50–51, 53
Arabis bolboelli
disease dynamics in plant communities and, 23
Arginine-rich RNA-binding motif
genome packaging by spherical plant RNA viruses and, 61, 66, 70–73
Armillaria luteobubalina
disease dynamics in plant communities and, 26
Asclepias spp.
flower-infecting fungi and, 265
Ascomycetes
fungal pathogen genomics and, 340–42
Ashbya gossypii
fungal pathogen genomics and, 345
Asochyta spp.
flower-infecting fungi and, 268
Aspergillus spp.
climate change effects on plant disease and, 494
crop loss quantification and modeling, 99
fungal pathogen genomics and, 339, 341–48, 356
Atkinsonella spp.
flower-infecting fungi and, 268
ATR1 genes
oomycete effector secretome catalogue and, 45, 51–52
Attachment
Enterobacteriaeceae and comparative genomics, 317
fitness of human enteric pathogens on plants and food safety, 373
Attainable yield
crop loss quantification and modeling, 91
Aureobasidium spp.
flower-infecting fungi and, 266
Autoinducer specificity
phenazines in fluorescent *Pseudomonas* spp. and, 430–31
Autoregulation
phenazines in fluorescent *Pseudomonas* spp. and, 430–31
Autotransporters
Enterobacteriaeceae and comparative genomics, 322

Avena fatua
disease dynamics in plant communities and, 24
Avr genes
Enterobacteriaeceae and comparative genomics, 321
fungal pathogen genomics and, 349
history of research, 7–10, 12
oomycete effector secretome catalogue and, 41–42, 44, 47–53
Azotobacter spp.
Enterobacteriaeceae and comparative genomics, 325

B

bacA gene
evolution of plant pathogenicity in *Streptomyces*, 480
Bacillus spp.
fitness of human enteric pathogens on plants and food safety, 368, 371
flower-infecting fungi and, 273
Bacitracin
evolution of plant pathogenicity in *Streptomyces*, 480
Balansia spp.
flower-infecting fungi and, 268, 275
Banana streak virus
tropical plant viruses and, 235–36, 247–49, 251
BarA gene
Enterobacteriaeceae and comparative genomics, 322
Barley yellow dwarf virus
crop loss quantification and modeling, 97
disease dynamics in plant communities and, 24, 30
Basidiomycetes
breeding cool-season turfgrasses for disease resistance and, 216
fungal pathogen genomics and, 342–43
Batrachochytrium dendrobatidis
fungal pathogen genomics and, 343
Beet necrotic yellow vein virus
tropical plant viruses and, 253
Bemisia tabaci
tropical plant viruses and, 236, 240, 242–46
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 184–85, 196–202, 204
Biocontrol
phenazines in fluorescent *Pseudomonas* spp. and, 417, 420–21, 433–34, 498
Biodiversity
climate change effects on plant disease and, 501
Bioinformatics
evolution of plant pathogenicity in *Streptomyces*, 482
Biotic stressors
climate change effects on plant disease and, 489, 502
Bipartite viruses
genome packaging by spherical plant RNA viruses and, 62, 65, 74–76
Bipolar mating system
Tilletia nonsystemic bunt fungi and, 125
Blossom blights
flower-infecting fungi and, 261, 268–69
Blumeria graminis
breeding cool-season turfgrasses for disease resistance and, 219
coexistence of related pathogen species on arable crops and, 176
disease dynamics in plant communities and, 22, 24, 28
history of research, 5
inducible defense-related proteins in infected plants and, 142
Bordetella pertussis
Enterobacteriaeceae and comparative genomics, 317, 322
Botryotinia spp.
flower-infecting fungi and, 268
Botrytis cinerea
coexistence of related pathogen species on arable crops and, 176
ethylene in host-pathogen interactions and, 396, 405–6
flower-infecting fungi and, 264–67
fungal pathogen genomics and, 339–41, 347
inducible defense-related proteins in infected plants and, 136, 145–47
phenazines in fluorescent *Pseudomonas* spp. and, 422
Bottlenecks
evolutionary
climate change effects on plant disease and, 501
Brachysporium spp.
flower-infecting fungi and, 268
Brassica spp.
coexistence of related pathogen species on arable crops and, 164, 170, 175
flower-infecting fungi and, 262
Breeding

for disease resistance
cool-season turfgrasses for disease resistance and, 213–28
Brevibacterium spp.
phenazines in fluorescent *Pseudomonas* spp. and, 420, 435
Bridge hypothesis
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 193
Brome mosaic virus
genome packaging by spherical plant RNA viruses and, 65, 67, 76–81
Bromus spp.
Tilletia nonsystemic bunt fungi and, 125
Brown patch
breeding cool-season turfgrasses for disease resistance and, 213, 220–21
Bunt fungi
Tilletia nonsystemic bunt fungi and, 113–27
Burkholderia spp.
fitness of human enteric pathogens on plants and food safety, 372
phenazines in fluorescent *Pseudomonas* spp. and, 418, 435

C

Ca^{2+} spiking
evolution of plant pathogenicity in *Streptomyces*, 469
Calcium-dependent protein kinase
ethylene in host-pathogen interactions and, 397
Calonectria spp.
flower-infecting fungi and, 268
cAMP signaling pathway
fungal pathogen genomics and, 350–51
Campylobacter spp.
fitness of human enteric pathogens on plants and food safety, 371–72, 374
Cap-independent translation
long-distance RNA-RNA interactions in plant virus gene expression and replication, 447–62
Capsid strategy
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 183, 189–92
Carbapenem
Enterobacteriaeceae and comparative genomics, 325
Carbendazim
coexistence of related pathogen species on arable crops and, 172–73
Carbon dioxide (CO_2)
climate change effects on plant disease and, 492, 494, 496–97
disease dynamics in plant communities and, 29–31
Cassava mosaic geminiviruses
tropical plant viruses and, 235–36, 240, 242–46, 251–52
Castanea dentata
disease dynamics in plant communities and, 27
Cavariella aegopodii
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 196–97
CBEL gene
oomycete effector secretome catalogue and, 50–51
CBP1 gene
fungal pathogen genomics and, 349
Cellulose
evolution of plant pathogenicity in *Streptomyces*, 469–70, 482
Cell wall-degrading enzymes
Enterobacteriaeceae and comparative genomics, 318
fungal pathogen genomics and, 349
Centaurea maculosa
disease dynamics in plant communities and, 26
Ceratitis capitata
fitness of human enteric pathogens on plants and food safety, 370
Cercospora spp.
flower-infecting fungi and, 262
inducible defense-related proteins in infected plants and, 142, 145–46
Cercosporella spp.
flower-infecting fungi and, 268
cf genes
Enterobacteriaeceae and comparative genomics, 319
Chaetomium globosum
fungal pathogen genomics and, 342
Chenopodium quinoa
genome packaging by spherical plant RNA viruses and, 77
Chitinases
inducible defense-related proteins in infected plants and, 138, 143, 145–47
Chlorosis

Heterodera glycines and, 293
Choanephora spp.
flower-infecting fungi and, 262, 268
Chondrilla juncea
disease dynamics in plant communities and, 21
Chytrids
fungal pathogen genomics and, 343
Ciborinia spp.
flower-infecting fungi and, 264, 268
Cicadulina spp.
tropical plant viruses and, 246
Cladistics
tropical plant viruses and, 241
Cladosporium spp.
fitness of human enteric pathogens on plants and food safety, 380
flower-infecting fungi and, 268
fungal pathogen genomics and, 349
inducible defense-related proteins in infected plants and, 151
oomycete effector secretome catalogue and, 47
Clavibacter michiganensis
evolution of plant pathogenicity in *Streptomyces*, 479
Claviceps spp.
flower-infecting fungi and, 262, 265, 268, 274–75
Climate change effects on plant disease
genomics to ecosystems
aggressiveness of pathogens, 496–97
climate change, 490–92
conclusions, 500–1
ecosystem level effects, 500
fecundity of pathogens, 496–97
gene expression, 497–98
host-pathogen interaction responses, 497–500
host resistance, 493–94
individual-level plant responses, 492–93
introduction, 490
microbial interactions, 496
models for disease prediction, 499–500
pathogen responses, 495–500
plant disease management, 498–99
population biology, 498
population-level plant responses, 494–95
summary points, 501–2
vector response, 495–97
virulence of pathogens, 496–97
Closteroviridae
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 197–202
cma operon
Enterobacteriaeceae and comparative genomics, 319
Coat proteins
genome packaging by spherical plant RNA viruses and, 61, 63, 70–73, 82
Cochliobolus spp.
flower-infecting fungi and, 268
history of research, 2
Coevolution
coexistence of related pathogen species on arable crops and, 163, 176–78
oomycete effector secretome catalogue and, 49
Coexistence of related pathogen species
on arable crops in space and time
agronomy, 171–73
coevolution, 176–78
comparative epidemiology, 165–67
environment, 173–74
global distribution, 174–76
introduction, 164–65
long-term coexistence, 173–74
medium-term coexistence, 171–73
short-term coexistence over crop/intercrop season, 167–71
summary points, 178
Cold stress
climate change effects on plant disease and, 495–98
inducible defense-related proteins in infected plants and, 135
Colletotrichum spp.
breeding cool-season turfgrasses for disease resistance and, 226
climate change effects on plant disease and, 494
disease dynamics in plant communities and, 24, 31
flower-infecting fungi and, 262, 268
inducible defense-related proteins in infected plants and, 145
Comparative epidemiology
coexistence of related pathogen species on arable crops and, 163, 165–67
Comparative genomics
Enterobacteriaeceae and comparative genomics, 305–27
Coniothyrium minitans
flower-infecting fungi and, 266
Conjugal transfer

fitness of human enteric pathogens on plants and food safety, 379
Contact toxicity
inducible defense-related proteins in infected plants and, 135
Contamination sources
fitness of human enteric pathogens on plants and food safety, 369–70
Conus textile
inducible defense-related proteins in infected plants and, 143
Cool-season turfgrasses
breeding for disease resistance
apomyxis, 214–16
brown patch, 220–21
creeping bentgrass, 226
cross-pollination, 219–27
dollar spot, 226–27
fine-leaved fescues, 227
future research, 227–28
gray leaf spot, 223–24
introduction, 214
Kentucky bluegrass, 214–19
leaf spot, 216–17
melting out, 216–17
perennial ryegrass, 223
perspectives, 227–28
seed production, 222–26
stem rust, 217–26
stripe smut, 218–19
turf-type tall fescue, 220
Coprinus cinereus
fungal pathogen genomics and, 342–43
crn genes
oomycete effector secretome catalogue and, 52–53
Cronartium spp.
disease dynamics in plant communities and, 27, 30
Crop losses
quantification and modeling
concepts, 91–93
conclusions, 103–4
disease-induced toxin accumulation, 98–99
expected outcomes, 94–98, 100
experiments, 101–2
framework linking crop loss knowledge/decisions, 94–96
initial questions, 90–91
introduction, 90–91
linking surveys, 101–2
lowland rice in tropical Asia, 99–101
methods, 91–93, 101–3
modeling, 101–2
overview, 91–93
perspectives, 101–4
research priorities, 98
spatial aspects, 102–3
summary points, 104
tactical decisions, 96–97
threshold for control, 96–97
Cross-pollination
breeding cool-season turfgrasses for disease resistance and, 219–27
Cross-talk
ethylene in host-pathogen interactions and, 393, 406
Crown rust
breeding cool-season turfgrasses for disease resistance and, 213
Cryphonectria parasitica
disease dynamics in plant communities and, 27
Cryptococcus neoformans
fungal pathogen genomics and, 339, 344
Cryptosporidium parvum
oomycete effector secretome catalogue and, 47
ctr1 gene
ethylene in host-pathogen interactions and, 399
Curvularia lunata
history of research, 2
Cutin-degrading enzymes
fungal pathogen genomics and, 349
Cylindrocarpon spp.
disease dynamics in plant communities and, 25
Cylindrosporium concentricum
inducible defense-related proteins in infected plants and, 145
Cysteine protease inhibitors
oomycete effector secretome catalogue and, 47
Cytokinins
evolution of plant pathogenicity in *Streptomyces*, 469, 478

D

Defense signaling
inducible defense-related proteins in infected plants and, 135
Developmental regulation
inducible defense-related proteins in infected plants and, 135–52
Dianthoviruses
long-distance RNA-RNA interactions in plant

virus gene expression and replication, 458–59
Dianthus silvester
flower-infecting fungi and, 264
Diaporthe spp.
flower-infecting fungi and, 268
Didymella spp.
flower-infecting fungi and, 268–70
Digitaria spp.
Tilletia nonsystemic bunt fungi and, 126
tropical plant viruses and, 246–47
Disease dynamics in plant communities
changing community structure, 25–27
direct effects, 30–32
disease severity, 22–25
diversity of communities, 23–29
diversity of individual host species, 20–29
global change, 29–32
indirect effects, 29–30
interspecific genetic diversity, 24–25
intraspecific genetic diversity, 22–23
introduction, 20
invasive pathogens, 27
natural epidemics, 25–27
nutrient flows, 27–29
pathogens, 20–29
summary, 32
Disease resistance
breeding cool-season turfgrasses for, 213–28
Dispersal
tropical plant viruses and, 235, 237–41, 251
Diversifying selection
oomycete effector secretome catalogue and, 45
Dollar spot
breeding cool-season turfgrasses for disease resistance and, 213, 226–27
Dormancy
Tilletia nonsystemic bunt fungi and, 119–20
Dothiorella spp.
flower-infecting fungi and, 268
Dothistroma septosporum
climate change effects on plant disease and, 496
Downy mildews
oomycete effector secretome catalogue and, 41
Drechslera spp.
breeding cool-season turfgrasses for disease resistance and, 213, 216–17, 220, 223
disease dynamics in plant communities and, 24
phenazines in fluorescent *Pseudomonas* spp. and, 420
Drosophila melanogaster
fitness of human enteric pathogens on plants and food safety, 370
fungal pathogen genomics and, 356
Drought
climate change effects on plant disease and, 492–94
DsRed gene
coexistence of related pathogen species on arable crops and, 169–70

E

Echinocloa colona
tropical plant viruses and, 237
Ecology
climate change effects on plant disease and, 489–502
crop loss quantification and modeling, 89–104
fitness of human enteric pathogens on plants and food safety, 372–77
flower-infecting fungi and, 261–67, 269–75
phenazines in fluorescent *Pseudomonas* spp. and, 421–23
tropical plant viruses and, 235–53
Economics
crop loss quantification and modeling, 89–104
Tilletia nonsystemic bunt fungi and, 118–19
Ecosystems
climate change effects on plant disease and, 489–502
disease dynamics in plant communities and, 19–32
ECP genes
fungal pathogen genomics and, 349
eds5 gene
ethylene in host-pathogen interactions and, 404
Effectors
Enterobacteriaceae and comparative genomics, 320
ethylene in host-pathogen interactions and, 402–3
oomycete effector secretome catalogue and, 41–54
Eggs
Heterodera glycines and, 284–86, 293–94
ehp genes
Enterobacteriaceae and comparative genomics, 325
Ehrharta calycina
Tilletia nonsystemic bunt fungi and, 119
EIL genes

ethylene in host-pathogen interactions and, 400–1
EIN genes
ethylene in host-pathogen interactions and, 393, 400–1, 403, 407
Elicitins
oomycete effector secretome catalogue and, 48–49
Elicitors
history of research, 9
oomycete effector secretome catalogue and, 42
Emergence
tropical plant viruses and, 235–36, 240, 242, 251, 253
Endemics
disease dynamics in plant communities and, 20
tropical plant viruses and, 242
Endoplasmic reticulum
ethylene in host-pathogen interactions and, 398–99
Enteric pathogens
fitness of human enteric pathogens on plants and food safety, 367–83
Enterobacter cloacae
fitness of human enteric pathogens on plants and food safety, 378
Enterobacteriaceae
comparative genomics and
alternative lifestyles, 324–25
attachment, 317
autotransporters, 322
cell wall-degrading enzymes, 318
conclusions, 325–26
Erwinia carotovora subsp. *atroseptica*, 310–11
flagella, 316
future research, 326–27
genomes, 307–14
introduction, 306
iron acquisition, 317–18
motility, 316
pathogenicity-associated regulators, 322–24
pathogenicity determinants, 313–24
pili, 317
polysaccharides, 316–17
Salmonella enterica typhi, 311–13
secretion systems, 319–22
soft rot *Erwiniae*, 306–7
summary points, 326
toxins, 318–19
two-partner secretion, 322
type I secretion, 319–20
type II secretion, 320
type III secretion, 320–21
type IV secretion, 321–22
Enterococcus faecalis
fitness of human enteric pathogens on plants and food safety, 372
Environment
coexistence of related pathogen species on arable crops and, 167, 169, 173–74
Enterobacteriaceae and comparative genomics, 305, 319
fitness of human enteric pathogens on plants and food safety, 372–73
phenazines in fluorescent *Pseudomonas* spp. and, 417, 420–24, 432–33
Enzyme inhibitors
oomycete effector secretome catalogue and, 45–47
Epichloë spp.
flower-infecting fungi and, 268
Epidemics
climate change effects on plant disease and, 489, 500–1
disease dynamics in plant communities and, 20, 25–27, 30, 32
fitness of human enteric pathogens on plants and food safety, 371–72
tropical plant viruses and, 240, 242, 252
Epidemiology
climate change effects on plant disease and, 489–502
coexistence of related pathogen species on arable crops and, 163, 165–67
fitness of human enteric pathogens on plants and food safety, 371
flower-infecting fungi and, 261
Tilletia nonsystemic bunt fungi and, 122–23
tropical plant viruses and, 253
epi genes
oomycete effector secretome catalogue and, 47
Epiphytic bacteria
fitness of human enteric pathogens on plants and food safety, 368, 376, 379
ERF genes
ethylene in host-pathogen interactions and, 393, 401–2
Erisyphe spp.
disease dynamics in plant communities and, 23–24
history of research, 5
inducible defense-related proteins in infected plants and, 146

Erwinia spp.
Enterobacteriaeceae and comparative genomics, 305–7, 309–11, 316–19, 321–27
ethylene in host-pathogen interactions and, 405–6
fitness of human enteric pathogens on plants and food safety, 372–73, 378, 381
flower-infecting fungi and, 265
oomycete effector secretome catalogue and, 50
phenazines in fluorescent *Pseudomonas* spp. and, 435
Escherichia coli
Enterobacteriaeceae and comparative genomics, 305, 316, 318–20, 322–26
evolution of plant pathogenicity in *Streptomyces*, 480
fitness of human enteric pathogens on plants and food safety, 367, 369–77, 379–80, 382
fungal pathogen genomics and, 339
genome packaging by spherical plant RNA viruses and, 79
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 195
Ethylene
host-pathogen interactions and
AP2, 401–2
biosynthesis, 394–97
cytoplasmic signaling, 398–400
downstream intracellular signaling, 399–400
effectors, 402–3
EIL, 400–1
EIN3, 400–1
endoplasmic reticulum receptors, 398–99
ERF, 401–2
future research, 407
gene-for-gene resistance, 404
induced resistance, 403–5
induction, 402–3
introduction, 394
jasmonic acid, 404
nuclear transmission of signal, 400–2
perception, 398–400
plant disease resistance, 402–6
posttranscriptional regulation, 396–97
primary transcriptional regulation, 400–1
rhizobacteria-induced resistance, 405
salicylic acid, 404–5
secondary transcriptional regulation, 401–2
signaling, 398–405
summary points, 406
transcriptional regulation, 395–96, 400–2
inducible defense-related proteins in infected plants and, 135–36, 152
eto genes
ethylene in host-pathogen interactions and, 396–97
etr1 gene
ethylene in host-pathogen interactions and, 404
Eucalyptus spp.
disease dynamics in plant communities and, 26, 31
Euprolella vaccinii
disease dynamics in plant communities and, 31
Evolution
climate change effects on plant disease and, 494, 497, 501
coexistence of related pathogen species on arable crops and, 163, 176–78
disease dynamics in plant communities and, 19–32
Enterobacteriaeceae and comparative genomics, 305, 319
fungal pathogen genomics and, 345
inducible defense-related proteins in infected plants and, 135
oomycete effector secretome catalogue and, 49
plant pathogenicity in *Streptomyces* and, 469–83
Tilletia nonsystemic bunt fungi and, 126
tropical plant viruses and, 240–41, 251–53
expI gene
Enterobacteriaeceae and comparative genomics, 323
Expressed sequence tags (ESTs)
fungal pathogen genomics and, 352–53
oomycete effector secretome catalogue and, 45
ExpS gene
Enterobacteriaeceae and comparative genomics, 322

F

fas operon
evolution of plant pathogenicity in *Streptomyces*, 478
Festuca spp.
breeding cool-season turfgrasses for disease resistance and, 213, 227
climate change effects on plant disease and, 495
Fitness
of human enteric pathogens on plants food safety and, 367–83

Flagella
Enterobacteriaeceae and comparative genomics, 316
Flaviviruses
long-distance RNA-RNA interactions in plant virus gene expression and replication, 457–58
Flower-infecting fungi
benefits/risks of infecting flowers, 263–64
calyx, 264
challenges in managing flower diseases, 273–75
classification, 267–73
conclusions, 275
corolla, 264
data base, 267–70

zygomycetes, 343
Fungi
breeding cool-season turfgrasses for disease resistance and, 213, 219
climate change effects on plant disease and, 493, 495–97

crop loss quantification and modeling, 99
disease dynamics in plant communities and, 25, 31
flower-infecting fungi and, 261–75
history of research, 6–9
inducible defense-related proteins in infected plants and, 135, 145, 151
Tilletia nonsystemic bunt fungi and, 113–27
Fusarium spp.
climate change effects on plant disease and, 500
crop loss quantification and modeling, 97, 99
disease dynamics in plant communities and, 24, 26–28
ethylene in host-pathogen interactions and, 402, 406
flower-infecting fungi and, 267–68
fungal pathogen genomics and, 337–40, 343–56
history of research, 3
inducible defense-related proteins in infected plants and, 141, 143, 145–46, 151
oomycete effector secretome catalogue and, 50
phenazines in fluorescent *Pseudomonas* spp. and, 420–21

G

Gaeumannomyces graminis
breeding cool-season turfgrasses for disease resistance and, 226
phenazines in fluorescent *Pseudomonas* spp. and, 420
Gastrointestinal (GI) tract
fitness of human enteric pathogens on plants and food safety, 367–83
Geminiviruses
tropical plant viruses and, 240, 242–46, 251–52
Gene-for gene interaction
history of research, 7–8
Gene-for-gene resistance
ethylene in host-pathogen interactions and, 404–6
General circulation models
climate change effects on plant disease and, 500, 502
Gene silencing
tropical plant viruses and, 243–45
Genetic diversity
disease dynamics in plant communities and, 19–32
Heterodera glycines and, 288–92
phenazines in fluorescent *Pseudomonas* spp. and, 428–30
Genome packaging
by spherical plant RNA viruses
accessory proteins, 69
arginine-rich RNA-binding motif, 70–73
auxiliary factors, 68–69
bipartite model, 74–76
brome mosaic virus, 76–81
coat protein motifs, 70–73
future research, 82
genome configuration, 63–66
introduction, 62
mechanisms, 69–70
molecular interactions, 66–67
monopartite model, 73–74
origin of assembly, 75–76
packaging signals, 67
physical size constraints, 67–68
principles, 62–69
red clover necrotic mosaic virus, 74–76
RNA sequences, 73–81
RNA structure, 68
summary points, 81–82
TLS-mediated assembly, 76–78
transfer RNA, 68–69
tripartite model, 76–81
turnip crinkle virus, 73–74
viral replicase, 69, 79–81
Genomics
breeding cool-season turfgrasses for disease resistance and, 213
climate change effects on plant disease and, 489–502
Enterobacteriaeceae and comparative genomics, 305–27
evolution of plant pathogenicity in *Streptomyces*, 469–71, 477, 479–80, 482–83
fungal pathogen genomics and, 337–43
Heterodera glycines and, 297–98
history of research, 1
long-distance RNA-RNA interactions in plant virus gene expression and replication, 447–62
tropical plant viruses and, 235, 247–48, 250–51
Germination
Tilletia nonsystemic bunt fungi and, 120
Gibberella spp.
flower-infecting fungi and, 262, 267–68
phenazines in fluorescent *Pseudomonas* spp. and, 420
GIP genes
oomycete effector secretome catalogue and, 45–47

Gliocladium catenulatum
flower-infecting fungi and, 266
Global climate change
climate change effects on plant disease and, 489–502
coexistence of related pathogen species on arable crops and, 175
disease dynamics in plant communities and, 19–32
Globodera rostochiensis
Heterodera glycines and, 285, 294, 297
Glomerella spp.
fitness of human enteric pathogens on plants and food safety, 379–80
flower-infecting fungi and, 267–68
Glomosporium spp.
flower-infecting fungi and, 268
Glomus spp.
fungal pathogen genomics and, 343
inducible defense-related proteins in infected plants and, 151
Glucanases
inducible defense-related proteins in infected plants and, 143, 145–46
oomycete effector secretome catalogue and, 45, 47
Glycine max
Heterodera glycines and, 283–98
GP42 transglutaminase
oomycete effector secretome catalogue and, 50
Graminella nigrifrons
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 196
Grasses
breeding cool-season turfgrasses for disease resistance and, 213–28
Gray leaf spot
breeding cool-season turfgrasses for disease resistance and, 213, 223–24
Green fluorescent protein (GFP)
coexistence of related pathogen species on arable crops and, 169–70
evolution of plant pathogenicity in *Streptomyces*, 476
fitness of human enteric pathogens on plants and food safety, 374–75
history of research, 10
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 202
Guard hypothesis
history of research, 10

H

Hatching
Heterodera glycines and, 284–86
Heat stress
climate change effects on plant disease and, 492, 495
hec genes
Enterobacteriaeceae and comparative genomics, 317
Helminthosporium spp.
history of research, 3, 7
Helper strategy
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 183, 192–95
Hemipterans
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 183
Heterodera glycines
context, 284
eggs, 284–86
females, 286–87
future research, 297–98
genetic diversity, 288–92
hatching, 284–86
HG types, 290–91
host relations, 287–88
infection, 286
juvenile development, 286
life history, 284–86
males, 286–87
management, 292
molecular nematode-host interactions, 292, 294–97
population dynamics, 287–88
races, 288–90
summary list, 297
unresolved issues, 297–98
HgCLE gene
Heterodera glycines and, 296
HG types
Heterodera glycines and, 290–91, 297
High-throughput analysis
climate change effects on plant disease and, 489, 501
hil genes
Enterobacteriaeceae and comparative genomics, 322

HIR1 gene
climate change effects on plant disease and, 493
hms genes
Enterobacteriaeceae and comparative genomics, 318
Hordeum vulgare
disease dynamics in plant communities and, 22, 27
hor genes
Enterobacteriaeceae and comparative genomics, 322
Horizontal gene transfer
Enterobacteriaeceae and comparative genomics, 305, 318–22, 324–25
evolution of plant pathogenicity in *Streptomyces*, 469, 471, 474, 478, 480–81
Heterodera glycines and, 286, 294
Host-pathogen interactions
climate change effects on plant disease and, 497–500
ethylene and, 393–407
Host resistance
climate change effects on plant disease and, 493–94, 501
Host-selective/specific (HST) toxins
history of research, 7–9
hrp genes
Enterobacteriaeceae and comparative genomics, 321
history of research, 7
Hyaloperonospora parasitica
ethylene in host-pathogen interactions and, 404, 406
inducible defense-related proteins in infected plants and, 136
oomycete effector secretome catalogue and, 48–49, 51
Hypericum perforatum
inducible defense-related proteins in infected plants and, 140
Hypersensitive response
Enterobacteriaeceae and comparative genomics, 321
evolution of plant pathogenicity in *Streptomyces*, 481
history of research, 6

I

Idium spp.
flower-infecting fungi and, 268
Inaccessibility
history of research, 4–5
Indica spp.
tropical plant viruses and, 242
Individual-level plant responses
climate change effects on plant disease and, 492–93
Induced systemic resistance
ethylene in host-pathogen interactions and, 393–94, 403–5
phenazines in fluorescent *Pseudomonas* spp. and, 422
Inducible defense-related proteins
in infected plants
conclusions, 150–51
families, 138–40
introduction, 136–38
miscellaneous situations, 149–50
occurrence, 138–40
perspectives, 150–51
PR-1-type proteins, 140–44
signaling, 147–49
summary points, 151–52
wine, 137
Induction
ethylene in host-pathogen interactions and, 402–3
history of research, 4–5
inf genes
oomycete effector secretome catalogue and, 48–49
Infection
flower-infecting fungi and, 261, 264–67
Heterodera glycines and, 286
inducible defense-related proteins in infected plants and, 135–52
Tilletia nonsystemic bunt fungi and, 120–22
Infectious dose
fitness of human enteric pathogens on plants and food safety, 369, 380–81, 383
Initiation
long-distance RNA-RNA interactions in plant virus gene expression and replication, 448–53
Injury
crop loss quantification and modeling, 89–104
tropical plant viruses and, 236, 238, 240, 242–43, 245–46
Intercepted radiation
crop loss quantification and modeling, 93
Interspecific competition
coexistence of related pathogen species on arable crops and, 163
Interspecific hybridization

breeding cool-season turfgrasses for disease resistance and, 213
Invasive pathogens
disease dynamics in plant communities and, 19–32
InvF gene
Enterobacteriaeceae and comparative genomics, 322
Iron acquisition
Enterobacteriaeceae and comparative genomics, 317–18
Isoxaben
evolution of plant pathogenicity in *Streptomyces*, 477
ISR genes
ethylene in host-pathogen interactions and, 405

J

Jasmonic acid
ethylene in host-pathogen interactions and, 393–94, 402–6
inducible defense-related proteins in infected plants and, 135–36, 144, 152
Juvenile development
Heterodera glycines and, 286

K

Karnal bunt
Tilletia nonsystemic bunt fungi and, 113, 115–27
Kissing stem-loop
long-distance RNA-RNA interactions in plant virus gene expression and replication, 447, 454, 461
Klebsiella spp.
Enterobacteriaeceae and comparative genomics, 325
Koch's postulates
molecular
phenazines in fluorescent *Pseudomonas* spp. and, 420–21
K-selection
flower-infecting fungi and, 261, 269–72, 274

L

Laccaria bicolor
fungal pathogen genomics and, 343
Lactisaria fuciformis
breeding cool-season turfgrasses for disease resistance and, 216
Land races
climate change effects on plant disease and, 495
Lantibiotics
evolution of plant pathogenicity in *Streptomyces*, 470
Large-scale random insertional mutagenesis
fungal pathogen genomics and, 355–56
Leaf spot
breeding cool-season turfgrasses for disease resistance and, 213, 216–17
Leersia spp.
Tilletia nonsystemic bunt fungi and, 126
Legionella pneumophila
Enterobacteriaeceae and comparative genomics, 322
fitness of human enteric pathogens on plants and food safety, 380
Leptosphaeria spp.
coexistence of related pathogen species on arable crops and, 163–76, 178
fungal pathogen genomics and, 339
Lespedeza spp.
disease dynamics in plant communities and, 24
Lewia spp.
flower-infecting fungi and, 268
Liatris spp.
disease dynamics in plant communities and, 24
Limonomyces roseipellis
breeding cool-season turfgrasses for disease resistance and, 216
Linking surveys
crop loss quantification and modeling, 101–2
Linum marginale
disease dynamics in plant communities and, 21, 23
Listeria monocytogenes
fitness of human enteric pathogens on plants and food safety, 367, 371, 377–79
Lithocarpus densiflorus
disease dynamics in plant communities and, 27
Lolium spp.
breeding cool-season turfgrasses for disease resistance and, 213
climate change effects on plant disease and, 495
Tilletia nonsystemic bunt fungi and, 118, 125
Long-distance dispersal
tropical plant viruses and, 235, 237–41, 251
Long-distance RNA-RNA interactions
in plant virus gene expression and replication
dianthoviruses, 458–59
flaviviruses, 457–58
initiation, 448–53

introduction, 448
luteoviruses, 448–54
nodaviruses, 459
perspectives, 461
potexviruses, 457, 459
premature termination model, 458–59
recoding, 453–54
replication, 455–58
rhabdoviruses, 457–58
subgenomic mRNA transcription, 458–61
summary points, 462
tombusviruses, 448–60
tospoviruses, 454–55, 457–58
translation, 448–55
Long-term coexistence
coexistence of related pathogen species on arable crops and, 163, 173–74
Luteoviruses
long-distance RNA-RNA interactions in plant virus gene expression and replication, 447–54
lux genes
Enterobacteriaeceae and comparative genomics, 323–24
fitness of human enteric pathogens on plants and food safety, 379
Lycopersicon chilense
inducible defense-related proteins in infected plants and, 145
Lysobacter antibioticus
phenazines in fluorescent *Pseudomonas* spp. and, 418
Lysozyme
inducible defense-related proteins in infected plants and, 138, 142

M

Macrophomina phaseolina
climate change effects on plant disease and, 498
Magnaporthe oryzae (*Magnaporthe grisea*)
fungal pathogen genomics and, 337–40, 343–56
inducible defense-related proteins in infected plants and, 145
Maize streak virus
tropical plant viruses and, 235–36, 251
Massively parallel signature sequencing (MPSS)
fungal pathogen genomics and, 354
Mastreviruses
tropical plant viruses and, 246–47
Mating behavior
Tilletia nonsystemic bunt fungi and, 123–25
Medium-term coexistence
coexistence of related pathogen species on arable crops and, 163, 171–73
Melampsora spp.
disease dynamics in plant communities and, 22–23, 27, 30
Melampsoridium betulinum
inducible defense-related proteins in infected plants and, 145
Melting out
breeding cool-season turfgrasses for disease resistance and, 216–17
Meta-ecosystem
climate change effects on plant disease and, 500
Metagenomics
climate change effects on plant disease and, 496
Metarhizium anisopliae
fungal pathogen genomics and, 347
Metschnikowia reukaufii
flower-infecting fungi and, 265
Microarray analysis
climate change effects on plant disease and, 493, 496
fungal pathogen genomics and, 352–54
Microbial community dynamics
phenazines in fluorescent *Pseudomonas* spp. and, 421–23
Microbiospora aerata
phenazines in fluorescent *Pseudomonas* spp. and, 420
Microbotrytum spp.
flower-infecting fungi and, 268
Microcystis aeruginosa
phenazines in fluorescent *Pseudomonas* spp. and, 422
Microdochium nivale
breeding cool-season turfgrasses for disease resistance and, 216, 219–20, 223, 226–27
Microelectrode ion flux estimation (MIFE)
evolution of plant pathogenicity in *Streptomyces*, 476
Microsphaerella spp.
flower-infecting fungi and, 268
Microsysteny
fungal pathogen genomics and, 346
Migration
climate change effects on plant disease and, 494, 501–2
Mitogen-activated protein kinases
ethylene in host-pathogen interactions and, 397, 399
fungal pathogen genomics and, 350–51

Molecular clock
tropical plant viruses and, 241
Molecular ecology
tropical plant viruses and, 235–53
Monarda spp.
disease dynamics in plant communities and, 24
Monilinia spp.
flower-infecting fungi and, 262–63, 265–70, 273–75
Monopartite viruses
genome packaging by spherical plant RNA viruses and, 62, 65, 67, 73–74
Monosporascus cannonballus
climate change effects on plant disease and, 497
Motility
Enterobacteriaeceae and comparative genomics, 316
genome packaging by spherical plant RNA viruses and, 63
Musa spp.
tropical plant viruses and, 248–49, 251
Mycosphaerella spp.
coexistence of related pathogen species on arable crops and, 163–67, 173
disease dynamics in plant communities and, 22
flower-infecting fungi and, 264
fungal pathogen genomics and, 339, 341
history of research, 5
Myrica spp.
disease dynamics in plant communities and, 28, 30
Myzus persicae
inducible defense-related proteins in infected plants and, 141
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 188–90

N

nabG gene
ethylene in host-pathogen interactions and, 404
Nasturnium officinale
phenazines in fluorescent *Pseudomonas* spp. and, 422
Nattrassia spp.
flower-infecting fungi and, 268
NBS-LRR proteins
oomycete effector secretome catalogue and, 51–52
nec1 gene
evolution of plant pathogenicity in *Streptomyces*, 469, 477–79, 481
Necrosis
ethylene in host-pathogen interactions and, 405
evolution of plant pathogenicity in *Streptomyces*, 472–73
flower-infecting fungi and, 261, 268–69
Nectria haematococca
fungal pathogen genomics and, 339–40
Nematode resistance
Heterodera glycines and, 283
Neonectria spp.
disease dynamics in plant communities and, 28
Neosartorya fischeri
fungal pathogen genomics and, 345
Neospora caninum
oomycete effector secretome catalogue and, 47
Neotyphodium coenophialum
breeding cool-season turfgrasses for disease resistance and, 220
Neovossia spp.
Tilletia nonsystemic bunt fungi and, 113–16, 127
Nephotettix spp.
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 186, 197
Nesoclutha declivata
tropical plant viruses and, 247
Neurospora crassa
fungal pathogen genomics and, 339–40, 342–44, 346–49, 356
Nicotiana spp.
Enterobacteriaeceae and comparative genomics, 317
ethylene in host-pathogen interactions and, 406
evolution of plant pathogenicity in *Streptomyces*, 481
genome packaging by spherical plant RNA viruses and, 77, 79–81
inducible defense-related proteins in infected plants and, 140, 145
oomycete effector secretome catalogue and, 48, 53
nifA gene
Enterobacteriaeceae and comparative genomics, 325
Nilaparvata lugens
crop loss quantification and modeling, 99
nim1 gene

ethylene in host-pathogen interactions and, 404
nip1 gene
oomycete effector secretome catalogue and, 47
Nitric oxide synthase (NOS)
evolution of plant pathogenicity in *Streptomyces*, 469, 475–76, 478–79
Nitrogen
climate change effects on plant disease and, 499
disease dynamics in plant communities and, 29
evolution of plant pathogenicity in *Streptomyces*, 469, 475
phenazines in fluorescent *Pseudomonas* spp. and, 417–36
NLP genes
oomycete effector secretome catalogue and, 50
Nodaviruses
long-distance RNA-RNA interactions in plant virus gene expression and replication, 459
Nonhost environment
fitness of human enteric pathogens on plants and food safety, 372–73
Nonpersistently transmitted plant viruses
virus-vector interactions mediating, 183, 186–95
Nonsystemic bunt fungi
Tilletia indica and Tilletia horrida
conclusions, 126–27
economics, 118–19
epidemiology, 122–23
evolution of Tilletiales, 126
genus, 114–15
history, 114–15
host ranges, 125–26
infection process, 120–22
introduction, 114
karnal bunt, 115–17, 119–26
mating behavior, 123–25
morphology, 118–19
nuclear behavior, 123–25
rice kernel smut, 117–26
ryegrass bunt, 118
summary, 126–27
teliospore dormancy, 119–20
teliospore germination, 120
Tilletia ehrhartae, 119
Tilletia walkeri, 118
veldt grass bunt, 119
nos genes
evolution of plant pathogenicity in *Streptomyces*, 475, 478–79
NPP1 gene
oomycete effector secretome catalogue and, 50
npr1 gene
ethylene in host-pathogen interactions and, 404
history of research, 13
NRPS genes
evolution of plant pathogenicity in *Streptomyces*, 475
fungal pathogen genomics and, 352, 356
ntrA gene
Enterobacteriaceae and comparative genomics, 325
Nucleus
ethylene in host-pathogen interactions and, 400–2
Tilletia nonsystemic bunt fungi and, 123–25
Nutrient flows
disease dynamics in plant communities and, 27–29

O

Oculimacula spp.
coexistence of related pathogen species on arable crops and, 163–67, 171–73
Oomycete effector secretome catalogue
apoplastic effectors, 45–51
ATR1^{NdWsB}, 51
ATR13, 51–52
Avr1b-1, 52
Avr3a, 52
CBEL, 50–51
conclusions, 53
CRN protein family, 52–53
cytoplasmic effectors, 51–53
elicitins, 48–49
enzyme inhibitors, 45–47
EPI1/EPI2 serine protease inhibitors, 47
EPIC1/EPIC2 cysteine protease inhibitors, 47
future research, 54
GIP1/GIP2 glucanase inhibitors, 45, 47
GP42 transglutaminase, 50
identification, 42, 44–45
inf, 48–49
introduction, 42–43
NLP, 50
NPP1, 50
PaNie, 50
PcF, 49
PEP13, 50
Ppat, 49, 50
PsojNIP, 50

RXLR protein family, 51–52
scr74, 49
scr91, 49
small cysteine-rich proteins, 47–50
summary points, 53
opg genes
Enterobacteriaeceae and comparative genomics, 316
Ophiosphaerella spp
breeding cool-season turfgrasses for disease resistance and, 219, 226
Ophiostoma novoulmi
disease dynamics in plant communities and, 30
Opportunistic pathogens
Enterobacteriaeceae and comparative genomics, 318
flower-infecting fungi and, 261
Origin of assembly
genome packaging by spherical plant RNA viruses and, 75–76
Orphan crops
climate change effects on plant disease and, 499
Orthologs
inducible defense-related proteins in infected plants and, 144
Oryza spp.
breeding cool-season turfgrasses for disease resistance and, 223
crop loss quantification and modeling, 99–101
inducible defense-related proteins in infected plants and, 135, 140, 142–44, 146, 152
Tilletia nonsystemic bunt fungi and, 117, 125
tropical plant viruses and, 237, 251–53
Oryzopsis miliacea
Tilletia nonsystemic bunt fungi and, 125
Ouchi S, 1–14
Outbreaks
fitness of human enteric pathogens on plants and food safety, 367–83
Overwintering
climate change effects on plant disease and, 495–98
Ovulinia spp.
flower-infecting fungi and, 264, 268
Ozone
climate change effects on plant disease and, 492–94, 497

P

Pandemics
tropical plant viruses and, 242–44
Panicum spp.
Tilletia nonsystemic bunt fungi and, 126
tropical plant viruses and, 237, 246
PaNie genes
oomycete effector secretome catalogue and, 50
Pantoea spp.
Enterobacteriaeceae and comparative genomics, 317
fitness of human enteric pathogens on plants and food safety, 373
phenazines in fluorescent *Pseudomonas* spp. and, 418
Paralogs
inducible defense-related proteins in infected plants and, 144
Parasitism
flower-infecting fungi and, 261–75
Pathogenicity islands
evolution of plant pathogenicity in *Streptomyces*, 469–71, 474, 478–80, 482
fitness of human enteric pathogens on plants and food safety, 381
PcF gene
oomycete effector secretome catalogue and, 49
PDF1.2 gene
evolution of plant pathogenicity in *Streptomyces*, 477
Peanut wart
evolution of plant pathogenicity in *Streptomyces*, 472
pec genes
Enterobacteriaeceae and comparative genomics, 323
peh genes
Enterobacteriaeceae and comparative genomics, 322
Penicillium spp.
fitness of human enteric pathogens on plants and food safety, 380
flower-infecting fungi and, 266
Pennisetum spp.
Tilletia nonsystemic bunt fungi and, 126
PEP13 gene
oomycete effector secretome catalogue and, 50
Peronophythora spp.
flower-infecting fungi and, 262, 268
Peronosclerospora sacchari
flower-infecting fungi and, 266
Peronospora spp.
ethylene in host-pathogen interactions and, 404, 406
history of research, 2

inducible defense-related proteins in infected plants and, 142, 145
Phacidium infestans
disease dynamics in plant communities and, 31
Phaecosphaeria spp.
coexistence of related pathogen species on arable crops and, 163–65
flower-infecting fungi and, 268
fungal pathogen genomics and, 339, 341
Phakopsora spp.
fungal pathogen genomics and, 339, 342
Phanerochaete chrysosporium
fungal pathogen genomics and, 339, 344
Phellinua weirii
disease dynamics in plant communities and, 26
Phenazine compounds
Enterobacteriaeceae and comparative genomics, 325
in fluorescent *Pseudomonas* spp. biosynthesis and regulation
antibiotic activity, 420–21
autoinducer specificity, 430–31
biochemistry, 424–30
biocontrol, 420–21, 433–34
biosynthesis, 424–33
conclusions, 434–35

global regulation, 431–32
introduction, 418–20
microbial community dynamics, 421–23
mode of action, 423–24
molecular Koch's postulates, 420–21
plants, 421–23
positive autoregulation, 430–31
regulation, 430–33
rhizosphere, 420–21
ring assembly, 424–28
summary list, 435–36
unanswered questions, 434–35
virulence, 423–24
Phleum pratense
phenazines in fluorescent *Pseudomonas* spp. and, 422
pho genes
Enterobacteriaeceae and comparative genomics, 322–23
Phoma spp.
coexistence of related pathogen species on arable crops and, 164–65
inducible defense-related proteins in infected plants and, 145
Phycomyces blakesleeanus
fungal pathogen genomics and, 343
Phyllosphere
fitness of human enteric pathogens on plants and food safety, 368, 373, 377, 379
Phyllosticta minima
climate change effects on plant disease and, 497
Phytoalexins
history of research, 6
Phytophthora spp.
climate change effects on plant disease and, 495–96, 500
coexistence of related pathogen species on arable crops and, 176
disease dynamics in plant communities and, 27–28, 32
flower-infecting fungi and, 266, 268
fungal pathogen genomics and, 343
inducible defense-related proteins in infected plants and, 139, 142, 145–46, 151
oomycete effector secretome catalogue and, 41–54
Phytotoxins
evolution of plant pathogenicity in *Streptomyces*, 469, 472–79, 481–82
Pichia pastoris
oomycete effector secretome catalogue and, 49
Pieris rapae
inducible defense-related proteins in infected plants and, 141
pil operon
Enterobacteriaeceae and comparative genomics, 317
Pinus spp.
disease dynamics in plant communities and, 26–27, 30–31
Pisatin
history of research, 5
PKS genes
fungal pathogen genomics and, 352, 356
Planococcus citri
tropical plant viruses and, 248
Plasmodium spp.
oomycete effector secretome catalogue and, 51
Plasmopara balstedii
oomycete effector secretome catalogue and, 47
Plectosphaerella cucumerina

ethylene in host-pathogen interactions and, 406
Poa spp.
breeding cool-season turfgrasses for disease resistance and, 213–19
Pollination
breeding cool-season turfgrasses for disease resistance and, 219–27
flower-infecting fungi and, 266–67
inducible defense-related proteins in infected plants and, 135
Pollution
coexistence of related pathogen species on arable crops and, 163, 173–74
Polyphenols
history of research, 6
Polysaccharides
Enterobacteriaeceae and comparative genomics, 316–17
Population genetics
climate change effects on plant disease and, 494–95, 498
Heterodera glycines and, 287–88
tropical plant viruses and, 253
Populus spp.
disease dynamics in plant communities and, 27, 30
Positive autoregulation
phenazines in fluorescent *Pseudomonas* spp. and, 430–31
Postia placenta
fungal pathogen genomics and, 343
Posttranscriptional regulation
ethylene in host-pathogen interactions and, 396–97
Potato scab
evolution of plant pathogenicity in *Streptomyces*, 469, 472–74, 481
Potato viruses
oomycete effector secretome catalogue and, 53
tropical plant viruses and, 253
Potexviruses
long-distance RNA-RNA interactions in plant virus gene expression and replication, 457, 459
POX genes
history of research, 5
Ppat genes
oomycete effector secretome catalogue and, 49–51
Premature termination model
long-distance RNA-RNA interactions in plant virus gene expression and replication, 458–59
PR genes
evolution of plant pathogenicity in *Streptomyces*, 477
inducible defense-related proteins in infected plants and, 135–52
Primary transcriptional regulation
ethylene in host-pathogen interactions and, 400–1
Primula spp.
flower-infecting fungi and, 266
Prm genes
Enterobacteriaeceae and comparative genomics, 322
Prochloraz
coexistence of related pathogen species on arable crops and, 171–73
Produce
fitness of human enteric pathogens on plants and food safety, 367–83
Programmed cell death
evolution of plant pathogenicity in *Streptomyces*, 469, 477, 482
Promoters
fitness of human enteric pathogens on plants and food safety, 378
Proteasomes
ethylene in host-pathogen interactions and, 397
Proteomics
history of research, 1
Proteus mirabilis
Enterobacteriaeceae and comparative genomics, 317, 322
Pseudocercosporella herpotrichoides
coexistence of related pathogen species on arable crops and, 164
disease dynamics in plant communities and, 22, 24
Pseudomonas spp.
Enterobacteriaeceae and comparative genomics, 318–21, 324–25
ethylene in host-pathogen interactions and, 396, 404–6
fitness of human enteric pathogens on plants and food safety, 372–74, 377–79, 381
history of research, 8–9
inducible defense-related proteins in infected plants and, 136, 141–42
phenazines in biosynthesis and regulation, 417–36

PsojNIP gene
oomycete effector secretome catalogue and, 50
Pst genes
Enterobacteriaeceae and comparative genomics, 321
Pti genes
ethylene in host-pathogen interactions and, 406
Pto genes
history of research, 8
Puccinia spp.
breeding cool-season turfgrasses for disease resistance and, 213, 216, 218, 222–23, 225
climate change effects on plant disease and, 494–95, 497
coexistence of related pathogen species on arable crops and, 167
disease dynamics in plant communities and, 22–24, 27
fungal pathogen genomics and, 339, 342
inducible defense-related proteins in infected plants and, 145
PWL genes
fungal pathogen genomics and, 349
Pycnostysanus spp.
flower-infecting fungi and, 268
Pyrenophora tritici-repentis
fungal pathogen genomics and, 339, 341
Pyreopeziza betulicola
inducible defense-related proteins in infected plants and, 145
Pyricularia grisea
breeding cool-season turfgrasses for disease resistance and, 213, 216, 220, 223
Pythium spp.
breeding cool-season turfgrasses for disease resistance and, 226, 228
ethylene in host-pathogen interactions and, 406
flower-infecting fungi and, 266
oomycete effector secretome catalogue and, 50
phenazines in fluorescent *Pseudomonas* spp. and, 420

Q

Qualitative resistance
breeding cool-season turfgrasses for disease resistance and, 213
Quantitative trait loci (QTLs)
breeding cool-season turfgrasses for disease resistance and, 213, 223–24, 226–28
Heterodera glycines and, 288
Quercus spp.
disease dynamics in plant communities and, 27
Quorum sensing
Enterobacteriaeceae and comparative genomics, 320, 323–24
fitness of human enteric pathogens on plants and food safety, 379
phenazines in fluorescent *Pseudomonas* spp. and, 417

R

Races
Heterodera glycines and, 283, 288–90
Race-specific interaction genes
fungal pathogen genomics and, 348–49
Radiation use efficiency
crop loss quantification and modeling, 93
Ralstonia solanacearum
Enterobacteriaeceae and comparative genomics, 319–20, 322
evolution of plant pathogenicity in *Streptomyces*, 481
inducible defense-related proteins in infected plants and, 142
Realized durability
climate change effects on plant disease and, 499
Recoding
long-distance RNA-RNA interactions in plant virus gene expression and replication, 453–54
Recombination
tropical plant viruses and, 235, 242–43, 251
Recurrent selection
breeding cool-season turfgrasses for disease resistance and, 213
Red clover necrotic mosaic virus
genome packaging by spherical plant RNA viruses, 65 and, 74–76
Red Queen hypothesis
disease dynamics in plant communities and, 21
Replicases
genome packaging by spherical plant RNA viruses and, 69, 78–81
Replication
long-distance RNA-RNA interactions in plant virus gene expression and replication, 455–58
Reproductive disease
flower-infecting fungi and, 261
rf genes

Enterobacteriaeceae and comparative genomics, 316
R genes
climate change effects on plant disease and, 499, 501
disease dynamics in plant communities and, 21
Enterobacteriaeceae and comparative genomics, 321
ethylene in host-pathogen interactions and, 402–6
evolution of plant pathogenicity in *Streptomyces*, 481
history of research, 7–8, 10, 12
inducible defense-related proteins in infected plants and, 135–52
oomycete effector secretome catalogue and, 51–52
tropical plant viruses and, 251–53
Rhabdoviruses
long-distance RNA-RNA interactions in plant virus gene expression and replication, 457–58
Rhizobacterium spp.
ethylene in host-pathogen interactions and, 405
Rhizobium spp.
evolution of plant pathogenicity in *Streptomyces*, 471
Rhizoctonia spp.
breeding cool-season turfgrasses for disease resistance and, 213, 216, 219, 221
crop loss quantification and modeling, 99
disease dynamics in plant communities and, 24
Enterobacteriaeceae and comparative genomics, 325
history of research, 3
inducible defense-related proteins in infected plants and, 145–46
Rhizopus spp.
flower-infecting fungi and, 268
fungal pathogen genomics and, 343, 347
Rhizosphere
Enterbacteriaeceae and comparative genomics, 324
fitness of human enteric pathogens on plants and food safety, 368, 373, 377
phenazines in fluorescent *Pseudomonas* spp. and, 417–36
Rhodobacter spp.
Enterobacteriaeceae and comparative genomics, 325
Rhodococcus fascians
evolution of plant pathogenicity in *Streptomyces*, 478
Rhynchosporium secalis
disease dynamics in plant communities and, 22, 24
fungal pathogen genomics and, 349
oomycete effector secretome catalogue and, 47
Rice kernel smut
Tilletia nonsystemic bunt fungi and, 113, 116–27
Rice mottle yellow virus
tropical plant viruses and, 235–42, 251
RNA packaging
genome packaging by spherical plant RNA viruses and, 61–82
ror genes
Heterodera glycines and, 297
rpg genes
history of research, 8, 13
r-selection
flower-infecting fungi and, 261, 269–71, 274
rulAB genes
fitness of human enteric pathogens on plants and food safety, 377
RXLR protein family
oomycete effector secretome catalogue and, 51–52
Ryegrass bunt
Tilletia nonsystemic bunt fungi and, 118

S

Saccharomyces cerevisiae
fungal pathogen genomics and, 338, 344–47, 349–50
history of research, 3
inducible defense-related proteins in infected plants and, 146
Salicylic acid
ethylene in host-pathogen interactions and, 393–94, 402–6
inducible defense-related proteins in infected plants and, 135–36, 152
Salmonella enterica
Enterobacteriaeceae and comparative genomics, 305, 311–13, 316, 318, 320–21
fitness of human enteric pathogens on plants and food safety, 367–69, 371–82
sap operon
evolution of plant pathogenicity in *Streptomyces*, 469–70, 478–79
fitness of human enteric pathogens on plants and food safety, 381

Saprolegnia parasitica
oomycete effector secretome catalogue and, 51
Schizachyrium spp.
disease dynamics in plant communities and, 24
Schizosaccharomyces pombe
fungal pathogen genomics and, 344, 346
Sclerophthora macrospora
flower-infecting fungi and, 262, 268
Sclerotinia spp.
breeding cool-season turfgrasses for disease resistance and, 213, 216
flower-infecting fungi and, 262, 264, 266, 268
fungal pathogen genomics and, 337, 339–41
inducible defense-related proteins in infected plants and, 146–47
Sclerotium spp.
inducible defense-related proteins in infected plants and, 145
Scolytus spp.
disease dynamics in plant communities and, 30
scr genes
oomycete effector secretome catalogue and, 49
sdiA gene
Enterobacteriaeceae and comparative genomics, 323
fitness of human enteric pathogens on plants and food safety, 379
Secondary transcriptional regulation
ethylene in host-pathogen interactions and, 401–2
Secretion systems
Enterobacteriaeceae and comparative genomics, 305, 318–22
Secretome
fungal pathogen genomics and, 349
oomycete effector secretome catalogue and, 41–54
Seed production
breeding cool-season turfgrasses for disease resistance and, 222–26
Selective packaging
genome packaging by spherical plant RNA viruses and, 61–82
Semipersistently transmitted plant viruses
virus-vector interactions mediating, 183, 195–202
Senescence
inducible defense-related proteins in infected plants and, 135
Septoria spp.
climate change effects on plant disease and, 498
coexistence of related pathogen species on arable crops and, 163–67, 173
disease dynamics in plant communities and, 24
evolution of plant pathogenicity in *Streptomyces*, 479
fungal pathogen genomics and, 341
Serial analysis of gene expression (SAGE)
fungal pathogen genomics and, 354
Serine protease inhibitors
oomycete effector secretome catalogue and, 47
Serratia marcescens
Enterobacteriaeceae and comparative genomics, 318–19, 322
Setaria spp.
tropical plant viruses and, 247
Shigella spp.
Enterobacteriaeceae and comparative genomics, 305, 320–22
fitness of human enteric pathogens on plants and food safety, 369, 371–72
Short-term coexistence
coexistence of related pathogen species on arable crops and, 163, 167–71
Sibling species
coexistence of related pathogen species on arable crops and, 163
sid2 gene
ethylene in host-pathogen interactions and, 404
Signature-tagged mutagenesis
fungal pathogen genomics and, 356
Silene dioca
flower-infecting fungi and, 264
Sinorhizobium meliloti
Enterobacteriaeceae and comparative genomics, 325
Site-specific chromosomal integration
evolution of plant pathogenicity in *Streptomyces*, 480
Small cysteine-rich proteins
oomycete effector secretome catalogue and, 47–50
SNF1 gene
fungal pathogen genomics and, 349
sod genes
phenazines in fluorescent *Pseudomonas* spp. and, 423
Soft rot
Enterobacteriaeceae and comparative genomics, 305–7
Solanum tuberosum
Heterodera glycines and, 297

Solidago altissima
disease dynamics in plant communities and, 23
Somatic embryogenesis
inducible defense-related proteins in infected plants and, 140
Sorangium spp.
phenazines in fluorescent *Pseudomonas* spp. and, 418
Sordaria macrospora
fungal pathogen genomics and, 346
Sorosporium spp.
flower-infecting fungi and, 268
Soybean cyst nematode
Glycine max and, 283–98
Specialists
flower-infecting fungi and, 261, 268
Species diversity
disease dynamics in plant communities and, 19–32
Spherical plant RNA viruses
genome packaging and, 61–82
Spore transmission
flower-infecting fungi and, 261
Sporobolomyces roseus
fungal pathogen genomics and, 343
Stagnospora nodorum
climate change effects on plant disease and, 498
coexistence of related pathogen species on arable crops and, 163–67, 173, 176
fungal pathogen genomics and, 339, 341
Staphylococcus aureus
fitness of human enteric pathogens on plants and food safety, 371
Stemphylium alfalfae
inducible defense-related proteins in infected plants and, 145
Stem rust
breeding cool-season turfgrasses for disease resistance and, 213, 217–19, 222–26
Sterility
flower-infecting fungi and, 261, 269, 272–73
Streak viruses
tropical plant viruses and, 236, 246–49
Streptomyces spp.
evolution of plant pathogenicity in
adaptation to soil environment, 470–71
Arabidopsis mutant, 476
cellulose, 476
cytokinins, 478
dipeptide backbone, 475
disease management, 481
eukaryotic relationships, 471
fas operon, 478
future research, 482–83
genomics, 471
horizontal gene transfer, 478
host physiology, 476
introduction, 470–71
nec1, 477–78
nitration, 475
PAI mobilization, 479–80
pathogenicity determinant, 474–77
pathogenicity island, 479–80
phenotype, 472
saponinase, 478–79
signaling, 476–77
site-specific chromosomal integration, 480
Streptomyces acidiscabies, 473, 475, 478–79
Streptomyces avermitilis, 471
Streptomyces bottropensis, 473
Streptomyces coelicolor, 471, 479–80
Streptomyces diastatochromogenes, 473, 479–80
Streptomyces europaeiscabiei, 474
Streptomyces lividans, 477
Streptomyces luridascabiei, 474
Streptomyces lydicus, 471
Streptomyces neyagawaensis, 473
Streptomyces niveiscabiei, 474
Streptomyces puniciscabiei, 474
Streptomyces scabies, 469, 472–73, 477, 479, 481–83
Streptomyces stellascabiei, 474
Streptomyces turgidiscabies, 473–74, 477, 479–80
summary points, 481–82
thaxtomin, 472–79
unresolved issues, 482–83
history of research, 3
phenazines in fluorescent *Pseudomonas* spp. and, 420
Stress response
climate change effects on plant disease and, 489, 492–98, 501–2
inducible defense-related proteins in infected plants and, 135–52
Stripe smut
breeding cool-season turfgrasses for disease resistance and, 213, 218–19
Stunting
Heterodera glycines and, 293
Stylosanthes scabra
climate change effects on plant disease and, 494
disease dynamics in plant communities and, 31

Subgenomic mRNA
long-distance RNA-RNA interactions in plant virus gene expression and replication, 447, 458–62
Sulfur dioxide (SO_2)
coexistence of related pathogen species on arable crops and, 173–74
Suppressor genes
history of research, 1, 3, 5, 7
tropical plant viruses and, 243–45
Survival
fitness of human enteric pathogens on plants and food safety, 375–77
Sustainability
crop loss quantification and modeling, 89
Symbiosis
evolution of plant pathogenicity in *Streptomyces*, 471
Synergism
tropical plant viruses and, 235, 243–45, 251
Syntenic blocks
fungal pathogen genomics and, 337
syr genes
Enterobacteriaeceae and comparative genomics, 318–19
Systemic acquired resistance
inducible defense-related proteins in infected plants and, 136, 139, 147–49
Systemic infection
flower-infecting fungi and, 261, 264–67
Systems analysis
crop loss quantification and modeling, 89

T

Targeted mutagenesis
fungal pathogen genomics and, 354–55
Teliospores
Tilletia nonsystemic bunt fungi and, 119–20
Telomeres/telomeric regions
fungal pathogen genomics and, 337, 347–48
Temperature
climate change effects on plant disease and, 492–98
coexistence of related pathogen species on arable crops and, 163, 167, 169, 171, 175
disease dynamics in plant communities and, 29
Tetrahymena spp.
fitness of human enteric pathogens on plants and food safety, 380
Thalictrum flavum
inducible defense-related proteins in infected plants and, 140
Thanathephorus cucumeris
history of research, 3
Thaumatococcus daniellii
inducible defense-related proteins in infected plants and, 138
Thaxtomin
evolution of plant pathogenicity in *Streptomyces*, 469, 472–79, 481–82
Thielaviopsis basicola
inducible defense-related proteins in infected plants and, 145
Tilletia spp.
climate change effects on plant disease and, 498
flower-infecting fungi and, 262, 268–69
nonsystemic bunt fungi and, 113–27
TLH genes
fungal pathogen genomics and, 347
TLS RNA localization element
genome packaging by spherical plant RNA viruses and, 76–78, 82
Tobacco mosaic virus
history of research, 3–4
inducible defense-related proteins in infected plants and, 140
tolC gene
Enterobacteriaeceae and comparative genomics, 325
Tolyposporium spp.
flower-infecting fungi and, 268, 275
tomA gene
evolution of plant pathogenicity in *Streptomyces*, 479
Tombusviruses
long-distance RNA-RNA interactions in plant virus gene expression and replication, 447–61
Tospoviruses
long-distance RNA-RNA interactions in plant virus gene expression and replication, 454–55, 457–58
Toxoplasma gondii
oomycete effector secretome catalogue and, 47
Transcription
ethylene in host-pathogen interactions and, 395–96, 400–2
long-distance RNA-RNA interactions in plant virus gene expression and replication, 458–61
Transglutaminases
oomycete effector secretome catalogue and, 50
Translation
long-distance RNA-RNA interactions in plant

virus gene expression and replication, 448–55
TRI5 gene
fungal pathogen genomics and, 348
Trichoderma spp.
fungal pathogen genomics and, 342
phenazines in fluorescent *Pseudomonas* spp. and, 421
Tripartite viruses
genome packaging by spherical plant RNA viruses and, 62, 65, 76–81
Triticum spp.
disease dynamics in plant communities and, 22
Tilletia nonsystemic bunt fungi and, 125
Tropical plant viruses
molecular ecology and emergence of
Africa, 242–47
banana streak virus, 247–49
Bemisia tabaci, 245–46
cassava mosaic disease, 242–46
center of origin, 239–40
conclusions, 246, 250–53
dispersal patterns, 238–39, 241
emergence, 240, 242
geminiviruses, 242–46
mastreviruses, 246–47
pandemics, 243–44
perspectives, 250–53
range of transmission, 237–38
recombination, 242–43
rice mottle yellow virus, 237–42
streak viruses, 246–49
synergism, 243–45
viral suppressors of gene silencing, 243–45
Tsuga mertensiana
disease dynamics in plant communities and, 26
Turnip crinkle virus
genome packaging by spherical plant RNA viruses and, 67, 73–74
Turnip yellow mosaic virus
genome packaging by spherical plant RNA viruses and, 65, 74
Two-partner secretion
Enterobacteriaeceae and comparative genomics, 322
txr1 gene
evolution of plant pathogenicity in *Streptomyces*, 476
txt genes
evolution of plant pathogenicity in *Streptomyces*, 475, 479
Typhula spp.
breeding cool-season turfgrasses for disease resistance and, 216, 219

U

Ultraviolet (UV) radiation
climate change effects on plant disease and, 496
fitness of human enteric pathogens on plants and food safety, 372–73
Uncinula necator
inducible defense-related proteins in infected plants and, 145
Unspecialized pathogens
flower-infecting fungi and, 261, 268
Uromyces spp.
disease dynamics in plant communities and, 24
Ustilago spp.
breeding cool-season turfgrasses for disease resistance and, 213, 219
flower-infecting fungi and, 262, 264–65, 270, 272, 275
fungal pathogen genomics and, 339, 342, 344, 347, 349
Tilletia nonsystemic bunt fungi and, 114, 123, 127
UvrY gene
Enterobacteriaeceae and comparative genomics, 322

V

Vaccinium myrtillus
disease dynamics in plant communities and, 29, 31
Valdensia heterodoxa
disease dynamics in plant communities and, 29
Vectors
climate change effects on plant disease and, 495–97
tropical plant viruses and, 235–38, 240, 242–43, 245–46
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 183
Vegetables
fitness of human enteric pathogens on plants and food safety, 367–83
inducible defense-related proteins in infected plants and, 135
Veldt grass bunt
Tilletia nonsystemic bunt fungi and, 119
Venereal disease paradigm
flower-infecting fungi and, 272–73

Venturia spp.
flower-infecting fungi and, 264, 268
Verticillium spp.
climate change effects on plant disease and, 493
crop loss quantification and modeling, 97
disease dynamics in plant communities and, 26
flower-infecting fungi and, 266
inducible defense-related proteins in infected plants and, 145
oomycete effector secretome catalogue and, 50
Vibrio spp.
Enterobacteriaeceae and comparative genomics, 323
phenazines in fluorescent *Pseudomonas* spp. and, 418
vir genes
climate change effects on plant disease and, 494, 496–97, 501
Enterobacteriaeceae and comparative genomics, 323
evolution of plant pathogenicity in *Streptomyces*, 469, 479, 481–82
phenazines in fluorescent *Pseudomonas* spp. and, 423–24
tropical plant viruses and, 252–53
Viruses
climate change effects on plant disease and, 496, 498
crop loss quantification and modeling, 97
disease dynamics in plant communities and, 24, 30
genome packaging by spherical plant RNA viruses and, 61–82
history of research, 3–4, 6–7, 9, 11
inducible defense-related proteins in infected plants and, 135, 140
long-distance RNA-RNA interactions in plant virus gene expression and replication, 447–62
oomycete effector secretome catalogue and, 53
tropical plant viruses and, 235–53
virus-vector interactions mediating nonpersistent/semipersistent transmission of plant viruses, 183
Virus-vector interactions
mediating nonpersistent/semipersistent transmission of plant viruses
capsid strategy, 189–92
Closteroviridae, 197–202
conclusions, 203–4
helper strategy, 192–95
history, 185–86
introduction, 184
means of spread, 185
nonpersistently transmitted plant viruses, 186–95
semipersistently transmitted plant viruses, 195–202
speculations, 203–4
summary points, 204
vectors, 186–87
virus-encoded components, 187–89

W

waa genes
Enterobacteriaeceae and comparative genomics, 316
Waksmania aerata
phenazines in fluorescent *Pseudomonas* spp. and, 420
wec genes
Enterobacteriaeceae and comparative genomics, 316
Whole-genome microarrays
fungal pathogen genomics and, 353–54
Wounding
inducible defense-related proteins in infected plants and, 135
wza genes
Enterobacteriaeceae and comparative genomics, 316

X

Xanthomonas campestris
Enterobacteriaeceae and comparative genomics, 318, 320
ethylene in host-pathogen interactions and, 406
fitness of human enteric pathogens on plants and food safety, 378
Xenopus laevis
genome packaging by spherical plant RNA viruses and, 77
Xylella fastidiosa
climate change effects on plant disease and, 498
Enterobacteriaeceae and comparative genomics, 322

Y

Yeasts
flower-infecting fungi and, 265, 267
fungal pathogen genomics and, 338, 344–47, 349–50, 356

history of research, 3, 5
inducible defense-related proteins in infected plants and, 146
Yersinia spp.
Enterobacteriaeceae and comparative genomics, 305, 318, 320, 322–23
fitness of human enteric pathogens on plants and food safety, 371
Yield loss
crop loss quantification and modeling, 90

Z

Zoonotics
fitness of human enteric pathogens on plants and food safety, 368
Zygomycetes
fungal pathogen genomics and, 343
